THE HANGING GARDENS

A vertical lifestyle center

The paperclip looped shape racetrack design serves as the main artery for the commercial retail development.

The small electric zero-emission vehicles of the future will find abundant street parking and multiple access points to the multi-level parking.

Highly efficient vertical circulation shafts connect local residents, office workers and mass-transit users to the retail core.

The green roofs - a scenic pathway, allow access to the retail stores.

The hanging gardens, the heart of the ancient city of Babylon
